

JDSU PLUS™ *Custom* Accelerating Your Success

PLUS Custom delivers tailored solutions that combine advanced customizations and integration of JDSU systems and instruments to optimize operations.

Custom Software Application Development

Our custom software development team has years of experience and subject-matter expertise in designing, developing, and deploying custom software applications to fit specific business needs.

Scripting and Report Writing

JDSU quickly generates targeted applications that significantly enhance the return on initial investments and that sort through the bulk of information to present exactly the details and views needed.

Customization of Standard Software Applications

Where technically possible, our experts provide analysis of specific requirements and tailor applications to meet specific business and operational needs, including development of specific network knowledge-base information and unique user views.

Integration Services

JDSU can provide technical and workflow integration services to ensure the seamless integration of our core solutions or custom applications into existing systems and processes. On some applications, JDSU provides a unique set of interface capability to provide homogenous connectivity to network elements and upstream systems regardless of the manufacturer type.

The JDSU PLUS Portfolio offers a complete suite of services aimed at resolving your operational challenges and advancing your adoption of new technologies to improve your effectiveness and efficiency, so you can provide more value to your customers and stake holders.

The PLUS portfolio offers a comprehensive combination of services that addresses your deployment and support, consulting, customization, and managed services needs to tailor your solution, maximizing your investment and your operations team.
