

# NetAnalyst Test Management Software – System Administration

Course Number	Delivery Method	Course Length	Language of Instruction
TT-NASA	Instructor-Led at Customer Site	2 Days	English

## Synopsis

Discussion is presented of NetAnalyst™ systems concepts, including test devices, server, and client user interfaces. Participants are instructed on compatibility, UNIX commands, and NetAnalyst testing strategy, and provided detailed information on and practice time using NetAnalyst file structure. Detailed information is provided on hardware and software installation, upgrades, and using the AdminTool. Participants are instructed on resolving common problems encountered by JDSU's Technical Assistance Center and on the advanced features of NetAnalyst, using a hands-on approach.

## Prerequisites

Centralized Testing Using NetAnalyst (TT-CT650NA), CENTEST® System Administration (TT-CTSA), or a basic understanding of centralized test concepts and UNIX.

## Who Should Attend

Technicians, engineers, and technical support personnel who are directly responsible for installing upgrades and maintaining network operations of the NetAnalyst Management Software.

## Course Goals

Upon completion of this course, participants will be able to:

- Install NetAnalyst hardware and software
- Conduct centralized testing using NetAnalyst
- Resolve common testing problems

## Course Outline

### Orientation and Course Goals

### NetAnalyst Systems Concept

- Testhead
- Server
- Client
- Compatibility chart

### Common UNIX Command

- Echo
- Setenv
- VI editor

### NetAnalyst File Structure

- Testhead
- Server
- Client

### Software Installation

- Testhead
- Host's table
- Server
- Client
- Xclient
- Installation
- Setup
- Finding the IP address of your computer or letting the computer find it
- Windows™ 95, 98, NT™
- Upgrade consideration
- Solaris configurations and patches

### Using the Admin Tool

- Moving around
- Entering license keys
- Removing locked license keys

# NetAnalyst Test Management Software – System Administration

## NetAnalyst Strategy

- User accounts (by user, by city, by company)
- Naming of DCS
- E-mail setup, redirection to other accounts
- Security

## ILOG, ILBLMAP

### Resolving Common Problems

- Starting and stopping nathum
- Testhead not available
- Common error messages
- Cleaning up files
- Releasing test with super user from VT100

### NetAnalyst Functions

- Printing reports from your local computer
- Copy and paste
- FTP
