

On-site Calibration for Cable Meters

Mobilizing Superior Service

JDSU's on-site calibration service provides the most comprehensive service offering in the industry. Our tiered 3-star, 4-star, and 5-star calibration options match your price, characterization, and documentation requirements. JDSU's calibration adjustment, firmware updates, hardware upgrades, and minor repairs provide service options other calibration vendors cannot perform. The limited product knowledge, documentation, and calibration equipment of calibration vendors prohibit them from providing the correct service to fit your needs.

Capitalizing on Unmatched Skill, Knowledge, and Equipment

OEM Product Knowledge

JDSU technicians understand the hardware, firmware, and user application of JDSU's cable meters. We know the important features required for proper calibration. An operational check ensuring each meter's functionality is included, a service other vendors do not provide.

Automated Test Equipment and Procedures

JDSU uses automated test equipment and procedures specifically designed for calibrating our cable meters. JDSU performs comprehensive testing unparalleled by other calibration providers. JDSU's ATE automatically updates the calibration due date in your meter's software, allowing you to view your meter's calibration due date.

Adjustment

JDSU's proprietary calibration procedures prohibit third party calibration vendors from performing calibration adjustments. Optionally, JDSU will provide adjustments with all calibrations.

Firmware Upgrades and Engineering Change Notices

JDSU automatically loads firmware feature enhancements while performing calibrations. Technicians also perform ECN's as necessary.

Depth of Preventative Maintenance and Repair

JDSU calibration service provides a proactive maintenance program for cable meters. Our technicians restore your meter's cosmetic appearance, check batteries, and clean each meter externally and internally. If a meter requires major repair, JDSU will present your options, and if necessary, manage the meter back to the factory.

Making Your Calibration Decision Easy, Convenient, and Cost-Effective

Simplify Logistics

Eliminates the logistics of sending in units one at a time. A JDSU program manager works with you ensuring the success of your calibration program.

Direct Communication

Direct engineering access for product operation, troubleshooting, and notification of out of tolerance units is a benefit only on-site calibration can provide.

Reduce Calibration Cost

Eliminates costs for shipping and handling, maintaining equipment sparing inventory, as well as lost technician productivity when returning units for factory calibration.

Reduce Turnaround Time

Meters are out of your technician's hands for only a short time, usually a couple of hours.

Nationwide Capability

Whether you have one location or many dispersed across the United States, JDSU can meet your requirements.

On-site Training

If chosen, JDSU can schedule on-site product or technology training to maximize your technicians' time during the on-site calibration event.

Pricing and Information

For an on-site calibration quote, or more information regarding JDSU's on-site calibration service, contact your local JDSU sales representative or account manager.

On-site calibration prices are based on the scope of work including, models, quantities, number of locations, calibration level, and duration of calibration project. Upgrades and repairs not included with calibrations will be charged an additional, mutually agreed upon price.
