

# The JDSU FiberTrace and FiberCable Software Version 6.0

## For Fiber Optic Results Post-Processing and Detailed Report Generation

### Highlights

- New user interface with true windowing and modern design
  - New tool bar with direct access to main functions
  - Menu reorganization for easier access to measurement and reporting functions
  - Improvement of result display
- New zoom management for better and more intuitive access to trace analysis
- Customizable access and results display
- Complete range of Pass/Fail thresholds allowing the user to analyze large numbers of results in a minimum timeframe, using the summary window

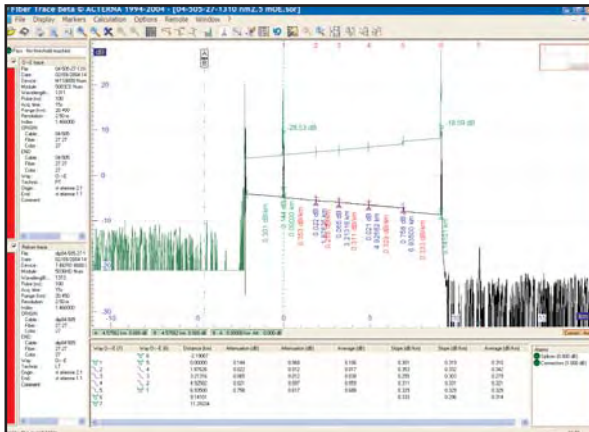

The JDSU OFS-200 Optical FiberCable and OFS-100 Optical FiberTrace are the only software packages to provide detailed and advanced functionality for OTDR, IL, ORL, CD, PMD, and Attenuation Profile results analysis, covering the entire fiber optic field test application.

Combined with a powerful and professional report generation capability, FiberCable is the only solution on the market today offering simultaneous OTDR, IL, ORL, CD, PMD, AP results management. This capability allows the generation of one acceptance report without the need for multiple steps or complex function swap.

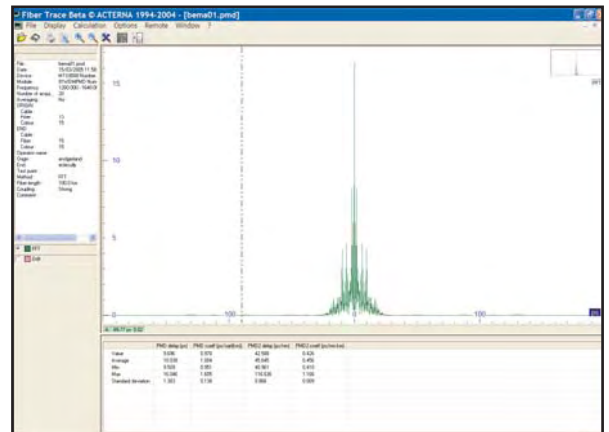

This new software allows the user a complete and dedicated solution for post-processing and reporting all results measured with JDSU fiber optic test platforms - MTS/T-BERD 8000 and MTS-5100.

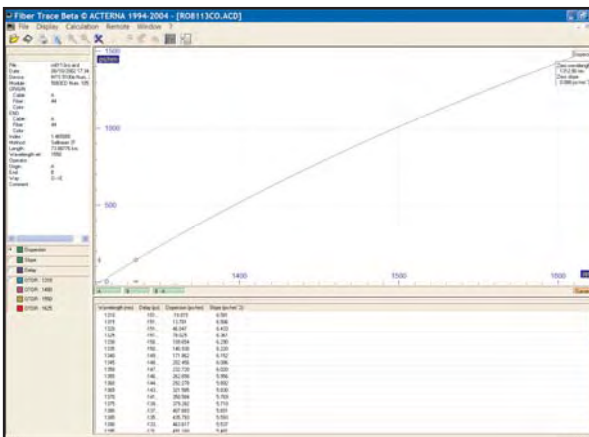

### OTDR Applications

Improved bidirectional analysis function and full compatibility with the innovative bidirectional acquisition process of the MTS-8000.

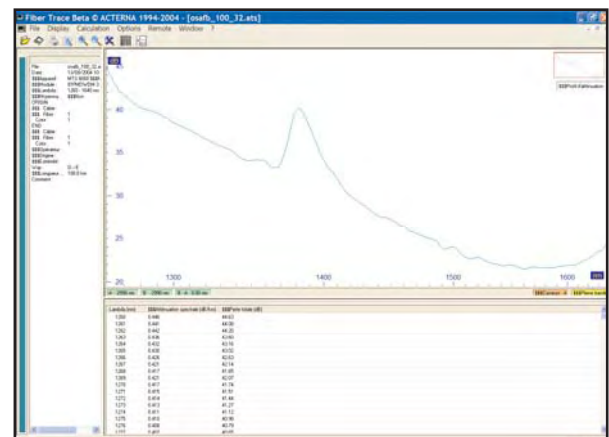

### PMD Applications

Analysis and reporting capability of long term PMD measurements.

### CD Applications

Measurement of dispersion compensating fibers.

### Attenuation Profile

Loss analysis over wavelength results and report generation.
